# Getting User Input

Forms

# Read Ch 9

of Learning Web Design  
(course book)

# A Resource I made for teachers

Everything

&

Specific Examples

# More on Fireworks

See [Vectortuts.com](http://Vectortuts.com) & Books

# More on Wireframes

You don't **HAVE** to do it for your  
final project

- An Excellent Article by Jesse Bennett-Chamberlain about developing a wireframe and all the way to a mock up - [http://www.digital-web.com/articles/redesigning\\_the\\_express\\_ionengine\\_site/](http://www.digital-web.com/articles/redesigning_the_express_ionengine_site/)

Is there a way to make like a template for sections of pages that are all the same and then “include” them on all of the pages? Then there is just one place to change common sections (header, footer, etc)?

# YES

Server Side Includes

More Explanation

# Two Ways

- With PHP
  - Watch me show you
- With SHTML
